

**VERSION WITH MARKINGS TO SHOW CHANGES MADE**

1                   1. (Twice Amended) A lighting apparatus comprising:  
2                   a first extruded portion shaped to mount on the nose of a stair step; and,  
3                   a second extruded portion coextruded with said first portion, said second  
4                   portion comprising a non-photoluminescent material selected to have a reflectance factor  
5                   greater than or equal to light gray polyvinyl chloride.

1                   7. (Twice Amended) A lighting apparatus mountable in connection  
2                   with a step of a staircase and comprising:  
3                   a first plastic extruded portion providing a step plate surface and a riser  
4                   surface mounted at a right angle with respect to one another and dimensioned to be mounted  
5                   on the nose portion of a stair step;  
6                   a second plastic non-photoluminescent light reflective strip coextruded with  
7                   said first portion and located so as to be disposed at and visible along an edge of said step in  
8                   a darkened environment; and,  
9                   a lamp mounted on a portion of a seat, said seat being located adjacent to  
10                  said step.

1                   10. (Amended) A lighting apparatus comprising:  
2                   a first extruded portion shaped to mount on a nose of a stair step; and,  
3                   a second non-photoluminescent reflective strip coextruded with said first  
4                   portion and located so as to be disposed at and visible along an edge of said step in a  
5                   darkened environment without connecting the strip to a power source.

1        14. (Amended) A lighting apparatus comprising:

2        a first extruded portion shaped to mount on a nose of a stair step; and,

3        a second extruded portion coextruded with said first portion, said second

4        portion comprising a non-photoluminescent material selected to have a reflectance factor

5        sufficient to illuminate the edge of said step.

1        17. (Amended) [The] A lighting apparatus [of Claim 16 wherein said

2        strip comprises a light gray polyvinyl strip] comprising:

3        a first extruded portion shaped to mount on a nose of a stair step; and,

4        a second extruded portion coextruded with said first portion, said second

5        portion comprising a strip of light gray polyvinyl material selected to have a reflectance

6        factor sufficient to illuminate an edge of said step and positioned by said first portion to be

7        disposed along the edge of said step.

No new claims have been added by this amendment.
